This is to mention in a small way the help we got from various sources including the websites Google.com, w3schools.com, numerous online banking sites of HDFC, State Bank of India, Axis Bank, Canara Bank, Bank of India, Punjab National Bank, ICICI Bank, etc. We were also helped by a book "Advanced CSS".Last but not the least we would always be grateful to our instructor Abhishek Kundu Sir for his immense help throughout our course and project work. And ofcourse a big thanks to the gfs community of GLOBSYN SKILLS who motivated us to produce a successful project.

Requirement Specification

Domain Description:

A system allowing individuals to perform banking activities at home, via the internet. Some online banks are traditional banks which also offer online banking, while others are online only and have no physical presence. Online banking through traditional banks enable customers to perform routine transactions such as transfer funds, balance inquiries, get mini statements, and stop-payment requests, and some even offer online loan applications.

Account information can be accessed anytime, day or night, and can be done from anywhere. A few online banks update information in real-time, while others do it daily. Once information has been entered, it doesn't need to be re-entered for similar subsequent checks, and future payments can be scheduled to occur automatically. Despite the advantages, there are a few drawbacks. It does take some time to set up and get used to an online account. Also, some banks only offer online banking in a limited area. In addition, when an account holder pays online, he/she may have to put in a check request as much as two weeks before the payment is due, but the bank may withdraw the money from the account the day that request is received, meaning the person has lost up to two weeks of interest on that payment. Online-only banks have a few additional drawbacks: an account holder has to mail in deposits (other than direct deposits), and some services that traditional banks offer are difficult or impossible for online-only banks to offer, such as cashier's checks.

Functional Requirements:

As per the facilities provided by several online banking softwares, our project aims at covering the following functionalities to serve the customers having account in our bank in a better way-

1. Opening new accounts.

2. *Viewing the account details.*

3. *Getting ones accounts summary.*

4. *Obtaining mini statements.*

5. *Balance enquiry.*

6. *Transfer funds to another account in the same bank.*

7. *Request for cheque book.*

8. *Request for loan and sanctioning of the same .*

Hardware Specification:
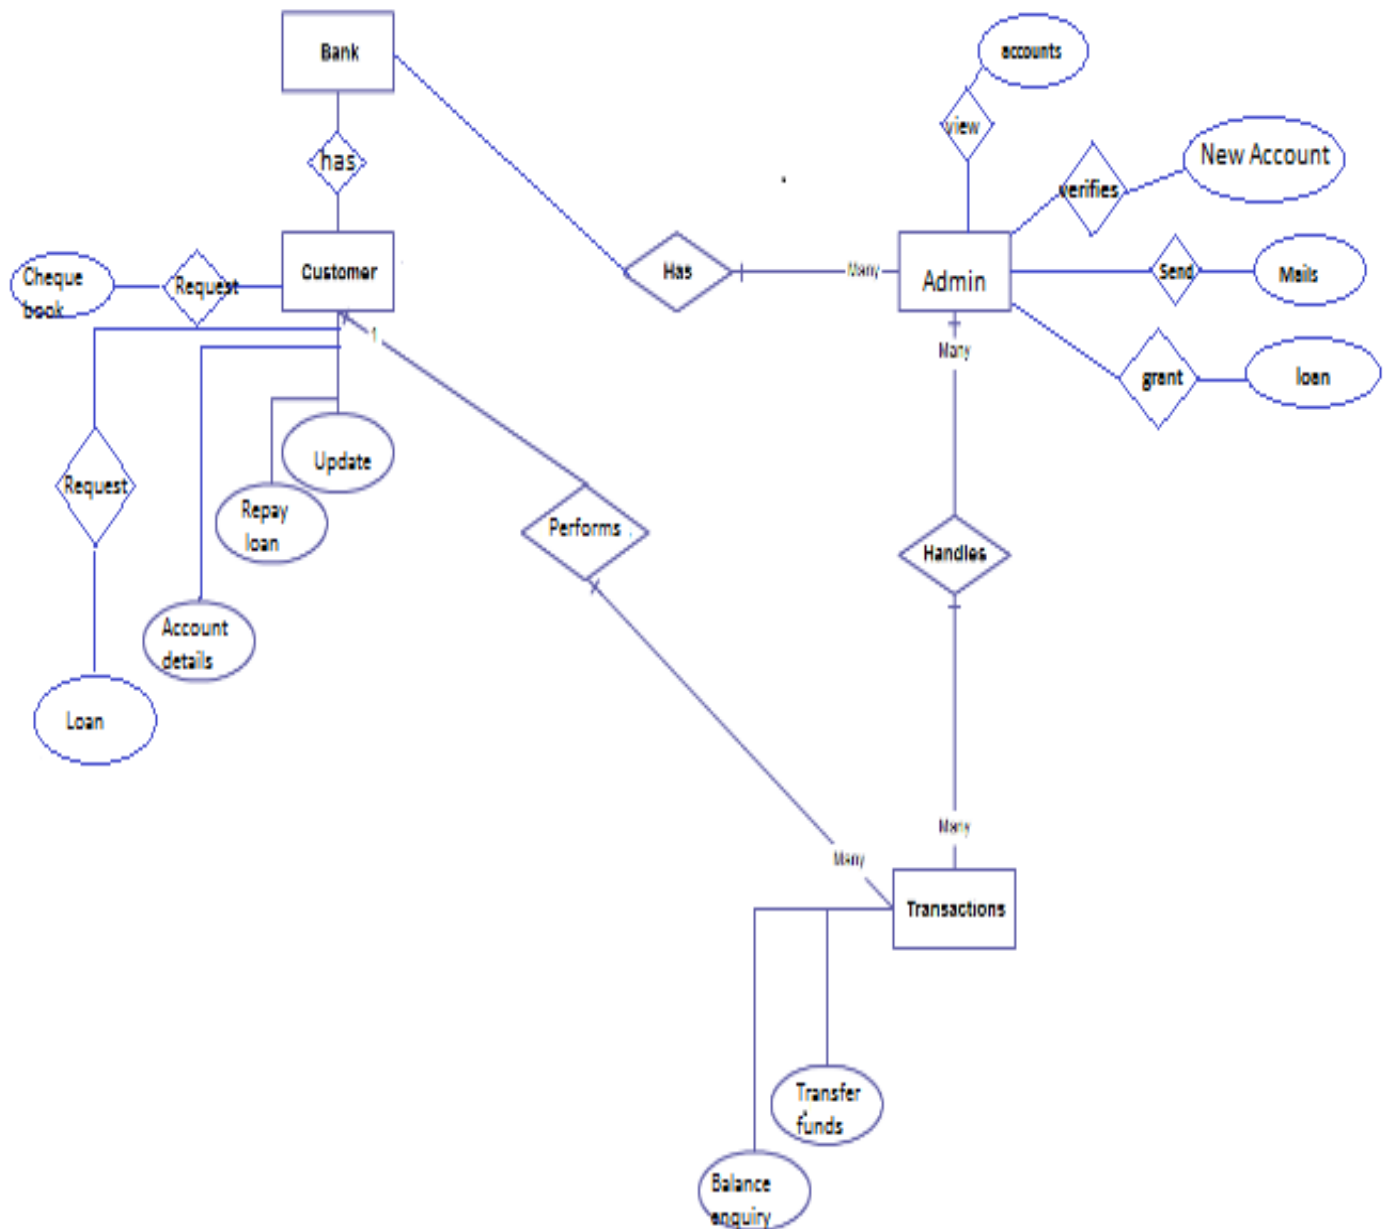

➢ *PC with 2 GB hard-disk and 256 MB RAM*

Software Specification:

| Number	Description	Version
1	XAMPP	3.1.0
2	Apache	2.4.3(Win32)OpenSSL/1.0.1c PHP/5.4.7
3	MySQL	5.5.27-MySQL Community Server
4	Net Beans IDE	7.1
5	Operating System	Windows XP or Above

Database Design

⊞ E-R Diagram:

E-R Diagram of online banking system

Table Description:

The database used in this project is 'netbanking' using MySQL server. The database consists of the following tables:

The functionalities and attributes of each table are described in the next page:

TABLE NAME	ATTRIBUTES	FUNCTIONALITY
Accountmaster	Accounttype, prefix, minbalance, interest	Details of all types of account.
Accounts	Accno,customerid,accstatus, Primaryacc,accopendate, accounttype,accountbalance Unclearbalance,accuredinterest	Details of the accounts,the customers have.
Branch	Ifscode,branchname,city, branchaddress,state,country	Details of the bank's branches.
Customers	Customerid,ifscode,firstname, lastname,Loginid,accpassword, transpasword,accstatus,city,state country,accopendate,lastlogin	Details of the customer.
Employees	Empid,employee_name,loginid, passwordEmailid,contactno, createdat,last_login	Details of the bank's employees
Loan	Loanid,loantype,loanamt, Interest,startdate	Loan specification
Loanpayment	Paymentid,date,paidamt, loanid	Details of the loans paid
Loantype	Loantype,prefix,maximumamt, minimumamt,Interest,status	Details of all types of loan
mail	Mailid,subject,message, mdatetime,Senderid,receiverid	Details of received and sent mails
Registered_payee	Customerid,payeename, Accountnumber, Accounttype bankname,ifsccode	Details of the payee
Transaction	Transtractionid,transactiondate,ment Paymentdate,Payeeid,receiveid, debitac,amount,paymentstat	Details of transaction done.

Screen Shots

There are several functions of the site. A few snapshots of some important pages of this site are shown below:

This is the homepage of our online banking project-'The Bank Of Gotham City'.

This is the login page of the bank.
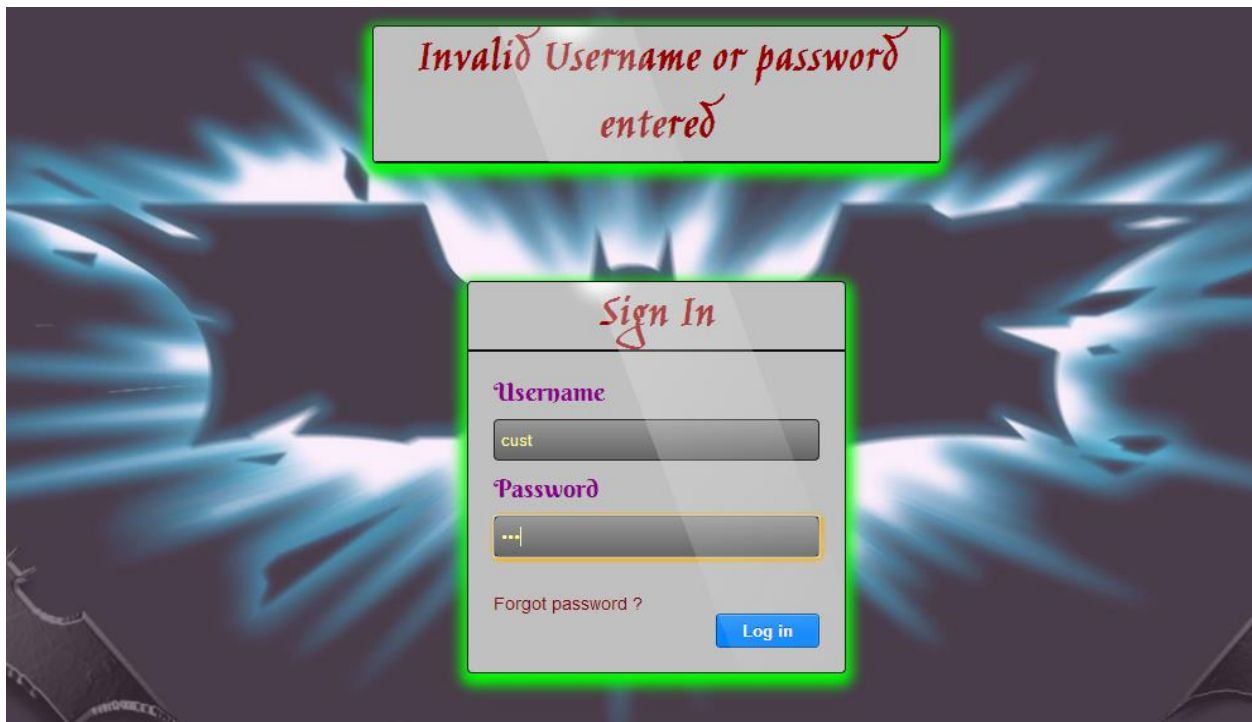

This page shows information about different branches of the bank.

This is the administrator's dashboard.
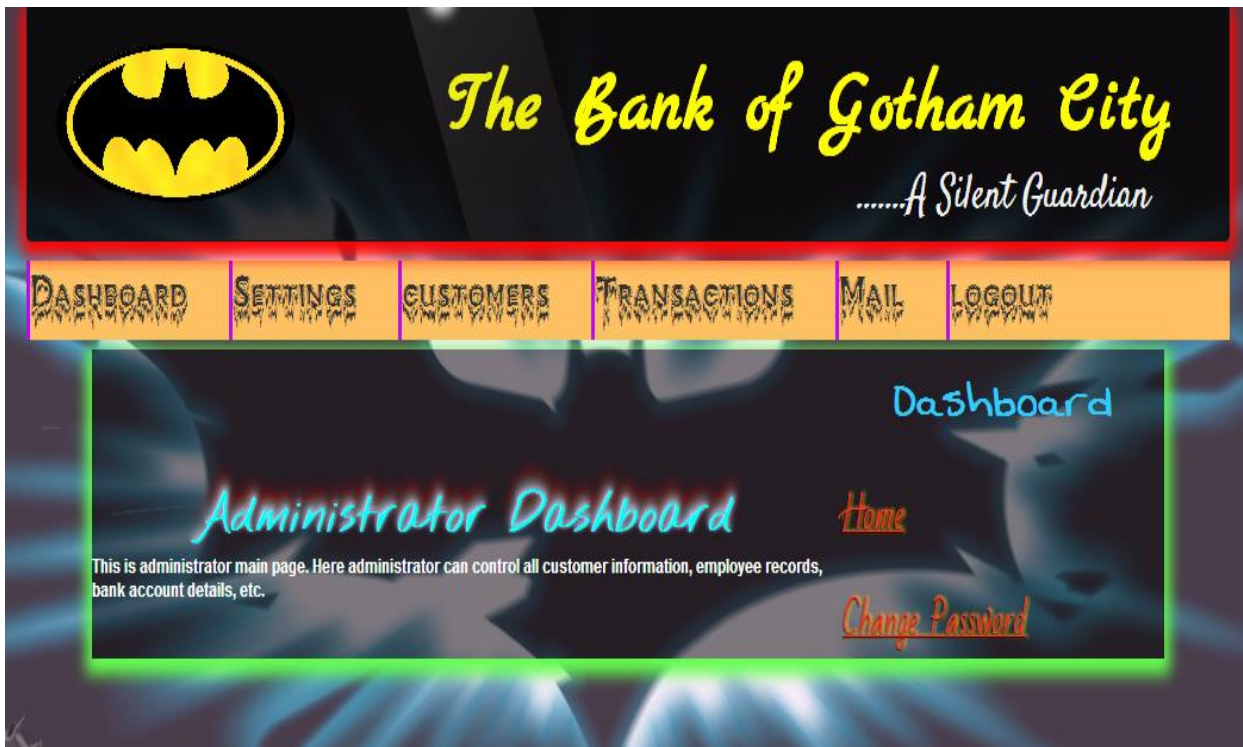

This is the customer's section.

And this page shows the details of the account of a particular customer.

    As Spiderman's premium foundation,our branch in Boston known as the Webster Bank has been committed to
helping individuals, families and businesses achieve
    their financial goals. In that mission, Webster's 3,000 bankers are guided by our core values, namely, to take
personal
    responsibility for meeting our customers' needs; to respect the dignity of every individual; to earn trust through
ethical behavior;
    to give of ourselves to our communities; and to work together to achieve outstanding results.<br/>
    Webster Bank provides consumer, business, government and institutional banking, as well as mortgage, financial
planning, trust
    and investment services through Webster Private Bank. Webster has 294 ATMs and delivers superior customer
service in person, on the phone,
    online, and through mobile devices.<br/><br/>

Future Scope of Improvement

Our project aims at the delivery of proper services to the users, but still we lack some utilities. For this inconvenience we are trying to bring in as much facilities as possible. In our development process we will firstly attempt for the online deposit and withdrawal of money from the bank. We will try to make the system more secure and free it from any flaws currently present. To reduce the work of the administrator will be a major concern, where we shall attempt to shift the verifying activities of each account details from manually to the system.

Conclusion

This was a small attempt from our side to create a prototype of a system, vital nowadays in everyone's life. In spite of its drawbacks, hope it will serve the people upto a certain extent and on our side we shall try to enhance the system for the betterment of society.

THANK YOU!!
